```java
class Thread1 implements Runnable
{ Thread t;
String a;
int b;
   Thread1(String s,int n)
      {
          a=s;
          b=n;
          t=new Thread(this, "NThread");
          System.out.println("CT:"+t);
          t.start();
      }

   public void run()
      {
          try
          {
              for(int n=5;n>0;n--)
              {
                  System.out.println(a);
                  Thread.sleep(b);
              }
          }
          catch(InterruptedException ie)
          {
              System.out.println("Child Thread Interrupted");
          }
          System.out.println("Child Thread quitting");
      }
}

class Thread2
{
    public static void main(String ss[])
    {
        Thread1 n1=new Thread1("BMS college of engineering",10000);
        Thread1 n2=new Thread1("CSE",2000);
```
